From more than 60 years MP Filtri is an Italian multinational company specializing in the hydraulic sector, founded by Bruno Pasotto.

Most of the production is carried out in Italy. It currently has trading and operational subsidiaries in Germany, France, United Kingdom, the United States, Canada, India, China, Singapore and UAE and a global network of retailers and distributors in over 100 countries.

Over 500 highly qualified people are employed across the world. There are two production facilities in Italy and one in United Kingdom and the United States. The biggest portion of our production satisfies the needs of international customers, while the remaining goes to Italian market.
Renowned for Innovation and Flexibility, MP Filtri has, since launch, paid obsessive attention to the research and development of cutting-edge technological solutions. Its research and development laboratory is considered one of the best in Europe.

The sectors that MP Filtri’s products are aimed at range from industrial to mobile operating machines, such as earthmoving machinery, wind turbine generators and machinery for the plastic industry made by the most prestigious global manufacturers.
RETURN FILTERS
FLOW RATES max 925 gpm (3500 l/min)
PRESSURE 290 psi (20 bar)
Return filters perform the task of filtering fluid and preventing particles from entering the system externally or from internal wear and tear of components.

SUCTION FILTERS AND STRAINERS
FLOW RATES max 264 gpm (1000 l/min)
Suction filters and Strainers protect pumps from contamination, while also providing additional flow diffusion in the suction line.

RETURN/SUCTION FILTERS
FLOW RATES max 66 gpm (250 l/min)
PRESSURE max 1160 psi (80 bar)
Hydraulic combined filters for installation on the return and suction lines of hydrostatic transmissions (HSTs) for commercial vehicles, construction machinery, agricultural vehicles, and mobile work equipment with a hydrostatic drive.

SPIN-ON FILTERS
FLOW RATES max 96 gpm (365 l/min) - PRESSURE max 508 psi (35 bar)
Spin-on filters are used as process and safety filters to protect individual pumps, valves or the entire hydraulic circuit from contamination.

HIGH PRESSURE FILTERS
FLOW RATES max 166 gpm (630 l/min)
PRESSURE max 8122 psi (560 bar)
High pressure filters are designed to withstand the maximum pressure of the system and are sized according to the specific flow rate required. They offer exceptional protection to sensitive components downstream of the filters.
LOW & MEDIUM PRESSURE FILTERS
FLOW RATES max 1189 gpm (4500 l/min)
PRESSURE max 1160 psi (80 bar)

Low and medium pressure filters are used as process filters to protect pumps, pressure reducers and the most sensitive hydraulic system components from contamination.

STAINLESS STEEL FILTERS
FLOW RATES max 42 gpm (160 l/min) - PRESSURE max 14,500 psi (1000 bar)

Stainless steel construction ensures peak protection when operating in corrosive environments or aggressive fluids. High pressure stainless steel filters are used to protect individual valves or the entire hydraulic circuit from contamination.

FILTER ELEMENTS
DIFFERENT OPTIONS OF FILTER ELEMENTS WITH THE MYCLEAN AND ZEROspark® CONCEPTS
Wide range of filter elements in various filtration grades for all MP Filtri filters and as market interchanges.

CLOGGING INDICATORS
Maximum filter element Dirt Holding Capacity (DHC) and life are achieved with the use of clogging indicators. These devices signal when the clogging causes an increase in pressure drop across the filter element.

MP Filtri knows how to manage it thanks to our ATEX CERTIFIED PRODUCTS
CONTAMINATION CONTROL SOLUTIONS

CONTAMINATION MONITORS
Portable solutions to automatically measure and display particulate contamination, moisture and temperature levels in a variety of hydraulic fluids.

SAMPLING ANALYSIS KIT
Kit for fluid sampling and the visual and digital analysis of solid contaminants. The bottle samplers are suitable for our portable devices.

INLINE CONTAMINATION MONITORS
A complete range of products to count particles, designed specifically to be mounted directly to systems, where ongoing measurement or analysis are required.

MOBILE FILTRATION UNITS
FLOW RATES max 48 gpm (180 l/min)
Mobile transfer and filtration units are the perfect solution for the oil maintenance of lubrication and hydraulic fluids in off-line filtration applications.
POWER TRANSMISSION

PRODUCT RANGE

BELL-HOUSING
Bell-Housings are used as connecting elements between IEC electric motors and a wide range of hydraulic pumps available on the international market.

COUPLINGS
Drive couplings provide the means by which power is transmitted from the electric motor to the hydraulic pump. AKG complete couplings are certificated: ATEX 2014/34/UE & U.K. Regulation S.I. 2016 No. 1107 (as amended)

ACCESSORIES
Our accessories line completes the range, adding value and features to the motor pump unit. It includes Foot brackets - PDMA, Damping rings ANMA and Damping rods - MPDR, Cleaning covers.

TANK ACCESSORIES
The complete range of tank accessories for hydraulic circuits comprises breather filters, filler and breather filters, filler caps, visual and electrical level indicators, pressure gauges selectors, flanges for fixing the oil tubes on the tank cover and inspection doors.

- Strainers
- Air breathers and filler plugs
- Filler and drainer plugs
- Visual oil level indicators
- Electrical oil level indicators
- Accessories

The tank accessories have a dual function at the tank inlet in the filtration of the incoming air and the pre-filtration of the fluid through the basket, in order to prevent the entry of foreign bodies during the filling or refilling operations.
