Return filters

MPLX series

Completely interchangeable with PALL 8420 & 8520

Maximum working pressure up to 1 MPa (10 bar) - Flow rate up to 1800 l/min

PASSION TO PERFORM

MPLX GENERAL INFORMATION

Technical data

Return filter

Maximum working pressure up to 1 MPa (10 bar) Flow rate up to 1800 l/min

MPLX is a range of return filters for protection of the reservoir against the system contamination.

Completely interchangeable with Pall 8420 & 8520, they are directly fixed to the reservoir, in immersed or semi-immersed position.

The use of the diffuser is recommended, to place the filter output always immersed into the fluid to avoid aeration or foam generation into the reservoir.

The filter output must be always immersed into the fluid to avoid aeration or foam generation into the reservoir.

Available features:

- Flanged connections up to 3", for a maximum flow rate of 1800 I/min
- Fine filtration rating, to get a good cleanliness level into the reservoir
- Bypass valve, to relieve excessive pressure drop across the filter media
- 6 fixing holes for installation, to meet any reservoir surface flatness and roughness
- Diffuser, to reduce the risk of aeration, foaming and noise
- Filler plug, to fill cleaned fluid into the tank without an additional connection
- Visual, electrical and electronic differential clogging indicators

Common applications:

- Heavy duty industrial equipment
- Heavy duty mobile equipment

Filter housing materials

- Head: Anodized aluminium
- Cover: Anodized aluminium
- Bowl: Phosphatized steel
- Bypass valve: Steel

Bypass valve

- Opening pressure 450 kPa (4.5 bar) ±10%

Δp element type

- Microfibre filter elements: 10 bar
- Fluid flow through the filter element from OUT to IN

Seals

- Standard NBR series A
- Optional FPM series V

Temperature

From -25 °C to +110 °C

Note

MPLX filters are provided for vertical mounting

Weights [kg] and volumes [dm3]

	Weights [kg]	Volumes [dm³]

Pressure drop

Filter housings Δp pressure drop

Bypass valve pressure drop

The curves are plotted using mineral oil with density of 0.86 kg/dm³ in compliance with ISO 3968. Δp varies proportionally with density.

THE CORRECT FILTER SIZING HAVE TO BE BASED ON THE TOTAL PRESSURE DROP DEPENDING BY THE APPLICATION.

THE MAXIMUM TOTAL PRESSURE DROP ALLOWED BY A NEW AND CLEAN RETURN FILTER HAVE TO BE IN THE RANGE 0.4 \div 0.6 bar.

The pressure drop calculation is performed by adding together the value of the housing with the value of the filter element. The pressure drop Δpc of the housing is proportional to the fluid density (kg/dm³); all the graphs in the catalogue are referred to mineral oil with density of 0.86 kg/dm³.

The filter element pressure drop Δpe is proportional to its viscosity (mm²/s), the corrective factor Y have to be used in case of an oil viscosity different than 30 mm²/s (cSt).

Sizing data for single filter element, head at top

 Δpc = Filter housing pressure drop [bar]

 Δpe = Filter element pressure drop [bar]

 $\mathbf{Y}=$ Corrective factor Y (see correspondent table), depending on the filter type, on the filter element size, on the filter element length and on the filter media

 $\mathbf{Q} = \text{flow rate (I/min)}$

V1 reference oil viscosity = 30 mm²/s (cSt)

V2 = operating oil viscosity in mm²/s (cSt)

Filter element pressure drop calculation with an oil viscosity different than 30 mm²/s (cSt)

 $\Delta pe = Y : 1000 \times Q \times (V2:V1)$ $\Delta p Tot. = \Delta pc + \Delta pe$

Verification formula

 Δp Tot. $\leq \Delta p$ max allowed

Maximum total pressure drop (Δp max) allowed by a new and clean filter

Application	Range (bar)
Suction filters	0.08 ÷ 0.10
Return filters	$0.4 \div 0.6$
	0.4 ÷ 0.6 return lines
	0.3 ÷ 0.5 lubrication lines
Low & Medium Pressure filters	$0.3 \div 0.4$ off-line in power systems
	0.1 ÷ 0.3 off-line in test benches
	0.4 ÷ 0.6 over-boost
High Pressure filters	0.8 ÷ 1.5
Stainless Steel filters	0.8 ÷ 1.5

MPLX calculation example

Application data:

Tank top return filter

Pressure Pmax = 10 bar

Flow rate Q = 200 l/min

Viscosity $V2 = 46 \text{ mm}^2/\text{s}$ (cSt)

Oil density = 0.86 kg/dm^3

Required filtration efficiency = 16 µm with absolute filtration

2" inlet connection

Calculation:

$\Delta pc = 0.05 \text{ bar}$ (see graphic below)

Filter housings Δp pressure drop.

The curves are plotted using mineral oil with density of 0.86 kg/dm³ in compliance with ISO 3968. Δp varies proportionally with density.

 $\Delta pe = (1.25 : 1000) \times 200 \times (46 : 30) = 0.38 \text{ bar}$

MPLX corrective factor

Corrective factor Y to be used for the filter element pressure drop calculation. The values depend to the filter size and length and to the filter media.

Reference oil viscosity 30 mm²/s

Filter element		Abso	Nominal filtration N Series			
Туре	A03	A06	A10	A16	A25	M25
MLX 250 2	3.00	3.04	1.46	1.25	1.17	0.20
MLX 660 2	1.29	1.26	0.52	0.44	0.38	0.10

 Δp Tot. = 0.05 + 0.38 = 0.43 bar

The selection is correct because the total pressure drop value is inside the admissible range for tank top return filters. In case the allowed max total pressure drop is not verified, it is

necessary to repeat the calculation changing the filter size.

Flow rates [I/min]

		Filter element design - N Series							
Filter series	Length	A03	A06	A10	A16	A25	M25 M60 M90	P10 P25	
MPLX 250	2	157	155	281	312	325	583	392	
MPLX 660	2	376	384	820	925	1018	1732	1332	

Maximum flow rate for a complete return filter with a pressure drop $\Delta p = 0.5$ bar.

Connections of filter under test:

2" SAE for MPLX 250

3" SAE for MPLX 660

The reference fluid has a kinematic viscosity of 30 mm²/s (cSt) and a density of 0.86 kg/dm³.

For different pressure drop or fluid viscosity we recommend to use our selection software available on www.mpfiltri.com.

Please, contact our Sales Department for further additional information.
